Master Thesis Proposal

Thesis Proposal Title

First Name Last Name

Supervised by

First Supervisor

Second Supervisor

Month 20XX

1 Introduction

1.1 Topic of This Thesis

- Provide reasonably detailed description of what you intend to do in your thesis.
- You may also discuss the challenges that you have to address.
- Reflect on the profile of the reader and PLEAAAASE, tell a story here and refrain from bombarding the readers with details which they may not be able to appreciate.

2 Related Work

2.1 Survey of Related Work

- What have other people done to solve the problem?
- Cite related work with `\cite`, e.g. [1]. Only cited works appear in the references.
- You should reference and briefly discuss at least the "top twelve" related works

2.2 Limitation and Deficits in the State of the Art

- List the deficits that you have discovered in the related work and explain them such that a person who is not deep into the technical details can still understand them. For each deficit, provide at least two references
- You should reference and briefly discuss at least the "top twelve" related works

3 Research Questions

- Which of the deficits are you going to solve?
- What is your intended approach?
- How will you compare you approach with existing approaches?

4 Work Plan

4.1 Work Packages

Planning is the replacement of randomness by error. (Einstein). Very much like you would never start a longer journey without a detailed travel plan, you should not start a thesis without a carefully though out work plan. A work package is a logical decomposition of a larger piece of work into smaller parts following a “divide and conquer" strategy. It is very specific to the problem that you are going to address. Refrain from a rather generic decomposition. If your work plan looks similar to those of your school mates, which may address completely different problems then you have not thought carefully enough about how you approach the problem. It is ok to have two generic work packages *Literature Study* and *Thesis Writing*. Discuss your work packages with your supervisors.

The bare minimum will include the following packages:

WP1 Literature Study

WP2 ...

WP3 ...

1. ...

WPy Evaluation of approach and comparison with similar approaches

WPz Thesis Writing

4.2 Milestones

Milestones mark the completion of a certain activity or at least a major achievement in an activity. Milestones are also decision points, where you reflect on what you have achieved and what options you have for continuing your work in case you have not achieved what was planned. Above all, milestones have to be measurable. As above, if your milestones are the same as those of your school mates, then you may not have thought carefully enough about how your thesis shall progress.

M1 Literature review completed and best practice identified

M2 ...

M3 ...

M4 Thesis submission

4.3 Schedule

Include a Gantt chart here. It doesn't have to be detailed, but it should include the milestones you mentioned above. Make sure to include the writing of your thesis throughout the whole schedule, not just at the end.

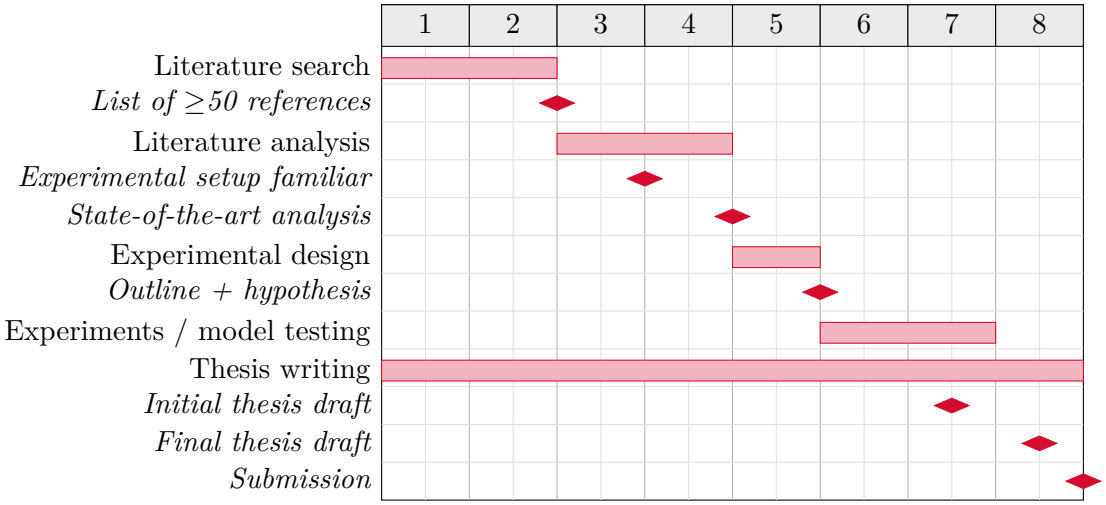

Figure 1: Thesis schedule (months)

4.4 Deliverables

Minimum Viable

- Results required to get a satisfying or sufficient grade.

Expected

- Results required to get a good grade.

Desired

- Results required to get an excellent grade.

Please note that the final grade will not only depend on the results obtained in your work, but also on how you present the results.
